DECLARACTION OF PERFORMANCE No EASF/20/0618

1. Unique identification code of the product-type: **WCF-EASF,WCF-EASF-C, WCF-EASF-E**

2. Intended use/es:

Product	Intended use
Metal injection anchors for use in masonry	Post-installed fastening in masonry unit, see appendix , especially Annexes B1 to B8

3. Manufacturer: **KLIMAS Sp. z o.o.**
ul. Wincentego Witosa 135/137
Kuźnica Kiedrzyńska 42-233 Mykanów

4. Authorised representative: **not applicable**

5. System/s of AVCP: **System 1**

6. European Assessment Document:
a) EAD 330076-01-0604
b) European Technical Assessments – ETA-20/0618 of 01/12/2023
c) TECHNICKY A ZKUSEBNI USTAV STAVEBNI PRAHA s.p.
d) Identification number of notified body– 1020

7. Declared performance/s:

Mechanical resistance and stability (BWR 1)

Essential characteristic	**Performance**
Reduction factor for job site tests (β – factor)	See appendix, especially Annexes C1 to C4
Characteristic resistance	See appendix, especially Annexes C1 to C4
Edge distances and spacing	See appendix, especially Annex B6, B7
Displacements	See appendix, especially Annexes C1 to C4
Durability	See appendix, especially Annex A3

Safety in case of fire (BWR 2)

Essential characteristic	**Performance**
Reaction to fire	Anchorages satisfy requirements for Class A1

8. Appropriate Technical Documentation and/or Specific Technical Documentation: **not applicable**

The performance of the product identified above is in conformity with the set of declared performance/s. This declaration of performance is issued, in accordance with Regulation (EU) No 305/2011, under the sole responsibility of the manufacturer identified above.

Signed for and on behalf of the manufacturer by:

Adam Szczepanowski

Kierownik działu technicznego

This declaration replaces the declaration from 07.04.2022.

This DoP has been prepared in different languages. In case there is a dispute on the interpretation the english version shall always prevail.

The Appendix includes voluntary and complementary information in English language exceeding the (language-neutrally specified) legal requirements.

1. Technical description of the product

The WCF-EASF, WCF-EASF-C (faster curing time) and WCF-EASF-E (extended curing time) for masonry is a bonded anchor consisting of a cartridge with injection mortar, a plastic sieve sleeve and an anchor rod with a hexagon nut and a washer. The steel elements are made of galvanized steel or stainless steel.

The sieve sleeve is pushed into a drilled hole and filled with injection mortar before the anchor rod is placed in the sieve sleeve. The steel element is anchored via the bond between metal part, injection mortar and masonry.

The illustration and the description of the product are given in Annex A.

2. Specification of the intended use in accordance with the applicable EAD

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The provisions made in this European Technical Assessment are based on an assumed working life of the anchor of 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the products in relation to the expected economically reasonable working life of the works.

3. Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Reduction factor for job site tests (β – factor)	See Annex C 1 to C 4
Characteristic resistance	See Annex C 1 to C 4
Edge distances and spacing	See Annex B 6, B 7
Displacements	See Annex C 1 to C 4
Durability	See Annex A 3

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorages satisfy requirements for Class A1

3.3 Hygiene, health and environment (BWR 3)

No performance determined.

3.4 General aspects relating to fitness for use

Durability and serviceability are only ensured if the specifications of intended use according to Annex B 1 are kept.

4. Assessment and verification of constancy of performance (AVCP) system applied with reference to its legal base

According to the Decision 97/177/EC of the European Commission[1], the system of assessment and verification of constancy of performance (see Annex V to Regulation (EU) No 305/2011) given in the following table applies.

Product	Intended use	Level or class	System
Injection anchors for use in masonry	For fixing and/or supporting to masonry, structural elements (which contributes to the stability of the works) or heavy units	-	1

[1] Official Journal of the European Communities L 073 of 14.03.1997

5. Technical details necessary for the implementation of the AVCP system, as provided in the applicable EAD

The factory production control shall be in accordance with the control plan which is a part of the technical documentation of this European Technical Assessment. The control plan is laid down in the context of the factory production control system operated by the manufacturer and deposited at Technický a zkušební ústav stavební Praha, s.p.[2] The results of factory production control shall be recorded and evaluated in accordance with the provisions of the control plan.

Issued in Prague on 01.12.2023

By

Ing. Jiří Studnička, Ph.D.
Head of the Technical Assessment Body

[2] The control plan is a confidential part of the documentation of the European Technical Assessment, but not published together with the ETA and only handed over to the approved body involved in the procedure of AVCP.

Installation in solid brick masonry

Installation of anchor rod with sieve sleeve

WCF-EASF, WCF-EASF-C, WCF-EASF-E for masonry	**Annex A 4**
Product description Sleeve	

Specifications of intended use

Anchorages subject to:
- Static and quasi-static loads

Base materials
- Solid brick masonry (Use category b), according to Annex B2.
- Hollow brick masonry (Use category c), according to Annex B2.
- Autoclaved aerated concrete (Masonry group d), according to Annex B3.
- Mortar strength class of the masonry M2,5 at minimum according to EN 998-2:2010.
- For other bricks in solid masonry, hollow or perforated masonry or autoclaved aerated concrete the characteristic resistance of the anchorages may be determined by job site tests according to EOTA Technical Report TR 053 and under consideration of the β-factor to Annex C1, Table C4 or Annex C 2, Table C8.

Note: The characteristic resistance for solid bricks are also valid for larger brick sizes and larger compressive strength of the masonry unit.

Temperature range:
- T_a: -40°C to +40°C (max. short. term temperature +40°C and max. long term temperature +24°C)
- T_b: -40°C to +80°C (max. short. term temperature +80°C and max. long term temperature +50°C)

Use conditions (Environmental conditions)
- (X1) Structures subject to dry, internal conditions (zinc coated steel, stainless steel, high corrosion resistance steel)
- (X2) Structures subject to external atmospheric exposure (including industrial and marine environment) or exposure in permanently damp internal condition, if no particular aggressive conditions exist (stainless steel A4, high corrosion resistant steel)
- (X3) Structures subject to external atmospheric exposure or exposure in permanently damp internal conditions or particularly aggressive conditions such as permanent or alternate immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulfurization plants or road tunnels, where de-icing materials are used) (high corrosion resistant steel)

Use categories in respect of installation and use:
- Category d/d - Installation and use in structures subject to dry, internal conditions
- Category w/d - Installation in dry or wet substrate and use in structures subject to dry, internal conditions
- Category w/w - Installation and use in structures subject to dry or wet environmental conditions

Design:
- Verifiable calculation notes and drawings are prepared taking account the relevant masonry in the region of the anchorage, the loads to be transmitted and their transmission to the supports of the structure. The position of the anchor is indicated on the design drawings.
- The anchorage are designed in accordance with the EOTA Technical Report TR 054, Design method A,, under the responsibility of an engineer experienced in anchorages and masonry work.

Installation:
- Dry or wet structures
- Anchor Installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.

WCF-EASF, WCF-EASF-C, WCF-EASF-E for masonry	**Annex B 1**
Intended use Specifications	

Table B1: Types and dimensions of block and bricks

Brick N° 1

Hollow clay brick Hueco Doble
according to EN 771-1
length/width/height = 245 mm / 110 mm / 88 mm
$f_b \geq 2{,}5$ N/mm^2 / $\rho \geq 0{,}74$ kg/dm^3

Brick N° 2

Hollow clay brick Porotherm P+W
according to EN 771-1
length/width/height = 373 mm/250 mm/238 mm
$f_b \geq 12$ N/mm^2 / $\rho \geq 0{,}9$ kg/dm^3

Brick N° 3

Solid clay brick Mz-NF
according to EN 771-1
length/width/height = 240 mm / 115 mm / 71 mm
$f_b \geq 20$ N/mm^2 / $\rho \geq 1{,}9$ kg/dm^3

Brick N° 4

Solid calcium silicate brick KSV-NF
according to EN 771-2
length/width/height = 240 mm / 115 mm / 71 mm
$f_b \geq 25$ N/mm^2 / $\rho \geq 1{,}8$ kg/dm^3

Brick N° 5

Perforated calcium silicate brick KSL-R-12-1,2-16DF
according to EN 771-2
length/width/height = 239 mm / 248 mm / 239 mm
$f_b \geq 15$ N/mm^2 / $\rho \geq 1{,}3$ kg/dm^3

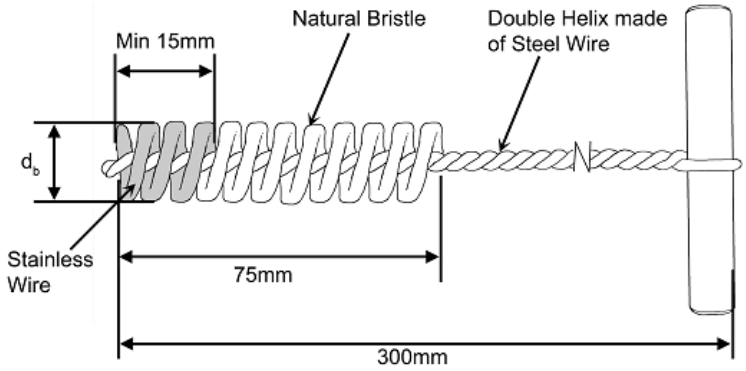
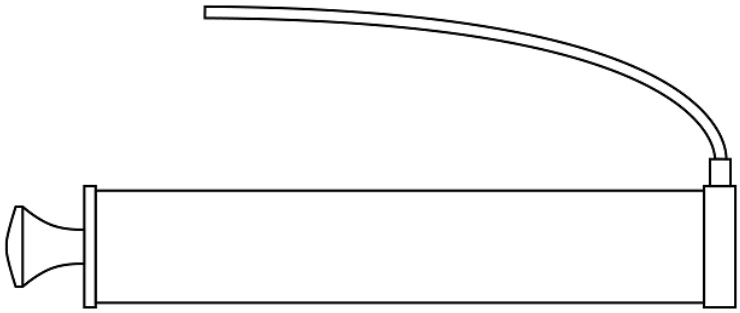
Cleaning brush



Cleaning pump



WCF-EASF, WCF-EASF-C, WCF-EASF-E for masonry	
Intended use Applicator guns Cleaning brush, Cleaning pump	**Annex B 4**

Installation instructions

	**1.** Drill the hole to the correct diameter and depth using a rotary percussive machine.		**2.** Use the cleaning pump to clean the hole.
	**3.** Use the cleaning brush to clean the hole. Diameter of cleaning brush according to Table B3, B5 or B7.		**4.** Use the cleaning pump to clean the hole.
	**5.** Use the cleaning brush to clean the hole. Diameter of cleaning brush according to Table B3, B5 or B7.		**6.** Use the cleaning pump to clean the hole.
	**7.** If use in hollow or perforated brick masonry: Plug the centering cap and insert the correct perforated sleeve flush with the surface of the base material.		**8.** Once the hole is prepared remove the screw cap from the cartridge.
	**9**. Attach the mixer nozzle and place the cartridge in the applicator gun.		**10.** Dispense the first part to waste, until an even colour is achieved.
	**11.** Remove any free water from the hole.		**12.** Insert the nozzle to the far end of the hole (using extension tubing if necessary) and inject the resin, withdrawing the nozzle/tube as the hole fills.
	**13.** If use in hollow or perforated brick masonry: Insert mixer nozzle to the end of the perforated sleeve and completely fill the sleeve with resin. Withdraw the mixer nozzle as the sleeve fills.		**14.** Immediately insert the fixing (steel element) slowly and with a slight twisting motion. Remove excess resin from around the mouth of the hole.
	**15.** Leave the fixing undisturbed until the cure time (see Table B9) has elapsed.		**16.** Attach the fixture and tighten the nut. Maximum installation torque moment according to Table B3, B5 or B7.
