

## Section 1. PRODUCT DESCRIPTION

### FRAME PLUG WITH HEX/COUNTERSUNK HEAD SCREW AND TX DRIVE – KPR-FAST 10 K/KPS-FAST 10 S

Sleeves of frame plugs are made of polyamide with a specially shaped steel screw type K (hex head) or S (countersunk head) for fixing of members to all substrate types. The screws are made of stainless steel. The plastic sleeve is expanded by screwing in the specific screw which presses the sleeve against the wall of the drilled hole. Frame plugs are characterized by very high resistance and problem-free installation in various materials. Plugs with hex head (K) are mostly used for fixing of metal members, and plugs with countersunk head (S) mostly for fixing of wood members. The sleeve is pre-assembled with the screw.

Substrates on which frame plug KPR-FAST 10 K-A4/KPS-FAST 10 S-A4 can be installed

according to ETAG 020:

- Category A – concrete
- Category B – solid clay brick and sand-lime brick
- Category C – hollow clay and sand-lime brick, porous block
- Category D – lightweight concrete blocks, autoclaved aerated concrete

Frame plugs hold European Technical Assessment: ETA-12/0272

THE DIAMETER OF THE SCREW'S CORE IS REDUCED

KPS-FAST 10 S A4 KPR-FAST 10 K A4

## Section 2. METHOD OF INSTALLATION

1. Original frame plugs delivered by the manufacturer can be used only
2. Before installation identify a substrate into which the plug will be installed and compare loads which the plug will carry to resistance values given in Product Data Sheet or European Technical Assessment
3. Select an adequate length of the plug so that expansion zone is in the construction material of the wall (thickness of member being fixed matches max. usable length of the plug –  $t_{fix}$ )
4. Use proper method of drilling according to a substrate type (holes in brickwork substrate made of hollow or autoclaved aerated concrete blocks should be drilled using a drill without impact)
5. Diameter of drilled holes should match diameter of the plugs used
6. Drilled holes in substrates of solid materials should be deeper by min. 10mm compared to the plug anchorage depth
7. Clean the holes in solid materials from drilling dust and debris with a back and forth motion of the drill at a reduced speed
8. Then insert the plug into a drilled hole, and drive the screw until it completely penetrates the sleeve
9. Forceful tightening of the screw can result in its failure which is not covered by the manufacturer's warranty
10. Installation shall be executed in temperature from  $-20^{\circ}\text{C}$  to  $+40^{\circ}\text{C}$ . (this applies to substrate temperature)

### Section 3. TECHNICAL DATA

TECHNICAL PARAMETERS		
Parameter	Unit	Value
Plug diameter	$d_k$ [mm]	10
Hole/drill diameter	$d_o$ [mm]	10
Effective anchorage depth	$h_{eff}$ [mm]	50/70
Drilled hole depth	$h_o$ [mm]	60/80
Drive type	[-]	(TX-40/SW-13)/(TX-40)*
Use categories	[-]	A B C D
Sleeve material	[-]	PA – polyamide
Screw material	[-]	Stainless steel
